Sequence 6, Application US/09475947A
Patent No. 6472154
GENERAL INFORMATION:
APPLICANT: Garner, Harold R.
APPLICANT: Wren, Jonathan D.
TITLE OF INVENTION: Polymorphic Repeats in Human Genes
FILE REPERENCE: UTSD0667
CURRENT APPLICATION NUMBER: US/09/475,947A
CURRENT FILING DATE: 1999-12-31
NUMBER OF SEQ ID NOS: 346
SOFWMARE: Patentin Ver. 2.1
SEQ ID NO 6
LENGTH: 14
TIPE: DNA
COGANISM: human

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        NS-05-580-794C-78

NS-05-580-794C-78

NS-05-580-794C-78

Sequence 78, Application US/09580794C

Patent No. 631389

GENERAL INFORMATION:

APPLICANT: Studyer, Lieven

APPLICANT: Louwagie, Joost

APPLICANT: NOSSAU, Rudi

TITLE OF INVENTION: PRADELTATION OF DRUG-INDUCED MUTATIONS IN THE REVERSE

TITLE OF INVENTION: PRADEL SECOND

TITLE OF INVENTION WINDRES: 08/913,833 now US/6,087,093

PRIOR FILING DATE: 1997-09-15

CURRENT FILING DATE: 1997-09-15

PRIOR PELING DATE: 1997-00-15

PRIOR APPLICATION NUMBER: EP 96870005.4

PRIOR APPLICATION NUMBER: EP 96870005.4

PRIOR APPLICATION NUMBER: EP 96870005.4

PRIOR PILING DATE: 1996-06-25

NUMBER OF SEQ ID NOS: 164

SEQ ID NOS: 164

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 13, Application US/085087618
Patent No. 6027920
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: GLOTONATCH, Armel
APPLICANT: Purification, Relano
APPLICANT: Purification, Francis
APPLICANT: Renaud, Michel
APPLICANT: Renaud, Michel
ITILE OF INVENTION: System for Protein Expression and
ITILE OF INVENTION: Secretion Especially in Corynebacteria
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   7.2%; Score 9.4; DB 1; Length 13; 90.9%; Pred. No. 52; tive 0; Mismatches 1; Indels
                                                                                                                                                                                                                                                                                                                                                                                                     APPLICANT: CLARK, ROBIN

GENERAL INFORMATION:
APPLICANT: Alexander Olek
APPLICANT: Christian Piepenbrock
APPLICANTION: Detection of single nucleotide polymorhphisms [SNPs] and cytosine
FILE OF INVENTION: Detection of single nucleotide polymorhphisms [SNPs] and cytosine
FILE OF INVENTION: Detection of single nucleotide polymorhphisms
FILE OF INVENTION: 300/1033
CURRENT APPLICATION NUMBER: DE 10019173.8
FRICK FILING DATE: 2000-04-07
NUMBER: OF INVENTION: 382046
SEQ ID NOS: 382046
SEQ ID NOS: 382046
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 48807, Application US/10257017B
Sequence 48807, Application US/10257017B
GENERAL INFORMATION:
APPLICANT: Alexander Olek
APPLICANT: Christian Piepenbrock
APPLICANT: Kurt Berlin
APPLICANT: Kurt Berlin
TITLE OF INVENTION: Detection of single nucleotide polymorhphisms [SNPs] and cytosi
TITLE OF INVENTION: methylations
FILE REFERENCE: E01/1193/WO
CURRENT APPLICATION NUMBER: US/10/257,017B
CURRENT FILING DATE: 2002-10-07
PRIOR APPLICATION NUMBER: DE 10019173.8
PRIOR FILING DATE: 2000-04-07
NUMBER OF SEQ ID NOS: 382046
SEQ ID NO 48807
LENGTH: 13
                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Alexander Olek
APPLICANT: Christian Piepenbrock
APPLICANT: Kurt Berlin
TITLE OF INVENTION: Detection of single nucleotide polymorhphisms [SNPs] and cytosine
TITLE OF INVENTION: methylations
FILE REFERENCE: E01/1193/WO
CURRENT FILING DATE: 2002-10-07
PRIOR APPLICATION NUMBER: DE 10019173.8
PRIOR FILING DATE: 2000-04-07
NUMBER OF SEQ ID NOS: 382046
SEQ ID NO 40809
LENGTH: 13

15 Sequence 27836, Application US/10257017B

16 Sequence 27836, Application US/10257017B

17 GENERAL INFORMATION:

2 APPLICANT: Alexander Olek

3 APPLICANT: Christian Piepenbrock

3 APPLICANT: Christian Piepenbrock

3 APPLICANT: Christian Piepenbrock

4 APPLICANT: Christian Piepenbrock

5 TITLE OF INVENTION: Detection of single nucleotide polymorhphisms [SNPs] and cytosin:

7 TITLE OF INVENTION: methylations

7 TITLE OF SOURTH APPLICATION NUMBER: DE 10019173.8

PRIOR APPLICATION NUMBER: DE 10019173.8

PRIOR FILING DATE: 2000-04-07

NUMBER OF SEQ ID NOS: 382046

5 SEQ ID NO 27836

1 LENGTH: 13
                                                                                                                                                                                                                                                          APPLICANT: Alexander Olek

Sequence 6924, Application US/10257017B
GENERAL INFORMATION:
APPLICANT: Alexander Olek
APPLICANT: Christian Piepenbrock
APPLICANT: Mit Berlin
TITLE OF INVENTION: Detection of single nucleotide polymorhphisms [SNPs] and cytosine
FILE REFERENCE: E01/1193/WO
CURRENT APPLICATION NUMBER: US/10/257,017B
CURRENT PILING DATE: 2002-10-07
PRIOR APPLICATION NUMBER: DE 10019173.8
PRIOR FILING DATE: 2000-04-07
NUMBER OF SEQ ID NOS: 382046
SEQ ID NO 6924
LENGTH: 13

Sequence 371943, Application US/10257017B

GENERAL INFORMATION:

APPLICANT: Alexander Olek

APPLICANT: Christian Piepenbrock

APPLICANT: Kurt Berlin

TITLE OF INVENTION: Detection of single nucleotide polymorhphisms [SNPs] and cytosine

TITLE OF INVENTION: methylations

FILE REPERENCE: E01/1193/WO

CURRENT APPLICATION NUMBER: US/10/257, 017B

CURRENT PILING DATE: 2002-10-07

PRIOR FILING DATE: 2000-04-07

NUMBER OF SEQ ID NOS: 382046

SEQ ID NO 371943

LENGTH: 12
